

PLANNING COMMISSION MEETING MINUTES

DATE: Monday, May 19, 2025
TIME: 5:00 PM
LOCATION: Greenville Village Hall, W6860 Parkview Drive, Greenville, WI

OPENING

1) CALL TO ORDER/ROLL CALL

The meeting was called to order at 5:03 PM.

PRESENT: Jack Anderson, Leanne Meidam-Wincentsen, Fred Rose, Jay Plemon,
Michael Simonds

EXCUSED: Blake Bomann

ABSENT: Brittany Helf

2) PUBLIC HEARINGS

3) PUBLIC COMMENT FORUM

Kristine Sagert, W6208 Everglade Road; Sub-Area C

Motion by Jack Anderson, second by Leanne Meidam-Wincentsen to close the Public
Comment Forum. Motion carried 5 - 0/ None.

BUSINESS AGENDA

4) CONSENT AGENDA

5) UNFINISHED BUSINESS FOR DISCUSSION & POSSIBLE ACTION

5.a Discuss/Consider Sub-Area Planning - Sub-Area C.

Memo - Sub Area C Plan.pdf

Sub Area C - Aerial Map-jmp markup #2.pdf

Sub Area C - Aerial Map.pdf

Topo Map_5 ft contour.pdf

R -Sub Area C Sewer Plan.pdf

R - Sewer Development Plan_Dec2021_Final set (1-4-2022).pdf

20250516112548580.pdf

20250516112357145.pdf

20250516112321142.pdf

Discussion included high water level markings/stormwater retention/wetland boundaries as follows:

- no subdivisions in the next 10 ft of elevation from high water mark.
- 820-835 ft. - not less than 1 acre lots
- 835-850 ft. - half acre lots
- beyond that could be smaller lots
- 20% coverage for large lots
- 40% coverage for medium lots

Other discussion included the locations of lift stations and mandatory sewer/water hook-up, ponds and wetland preservation areas, mapping of roads and trails for green space, lot sizes for transitional lots of at least a half-acre, the usage of the word "may" in transitional lots and standard language for setbacks off of corridor roads.

5.b Discuss/Consider Sub-Area Planning - Sub-Area B.

- Memo - Sub Area B Plan.pdf
- Sub Area B - Aerial Map-JMP Markup.pdf
- Sub Area B - Aerial Map.pdf
- Sub Area B - 10-ft contour.pdf
- Map of Tiers.pdf
- Map of Sub Areas.pdf
- Fox West Sewer Service Area Map.pdf
- R_-_Sewer_Development_Plan_Dec2021_Final_set__1-4-2022_.pdf

The commission decided there would be a lot of similarities for Sub-Area B as in Sub-Area C such as transitional lots and larger lots near the wetland areas. They also felt sidewalks are important to the connection of the school with the possibility of higher density closer to the school.

Sub-Areas A and B could be open for commercial along CTH JJ east of North Greenville School and along STH 76 south of Hillview Road.

Those areas marked as green space should be kept as green space and those adjacent to wooded areas should be a second tier of preservation.

There also should be considerations of potential school expansion.

6) NEW BUSINESS FOR DISCUSSION & POSSIBLE ACTION

6.a Discuss/Consider Sub-Area Planning - Sub-Area A.

- Memo - Sub Area A Plan.pdf
- Sub Area A - Aerial Map -JMP Markup.pdf
- Map of Tiers.pdf
- Map of Sub Areas.pdf
- Fox West Sewer Service Area Map.pdf

Considerations for Sub-Area A include: cohesive road pattern, stay with similar sized lots, similar concept for lift station, officially map Julius Drive and map road to the southern portion of the area - Country Meadows Phase 2 to the north and same to the east, recreational trails, restoration of the Kester Dam, park space, half acre lots near the streams, concerns with stormwater and larger lots around the wooded area.

6.b Discuss/Consider Comprehensive Plan Policies/Goals/Action Items - Chapter 4 Land Use

Memo - Chapter 4 Land Use.pdf

Discussion was held to determine if the village should continue following the strategies of 4a-2 and 4a-5. Staff commented that the market determines the need for growth as it relates to Strategy 4a-5. Considerations included how it would impact staffing, schools and other services provided by the village.

6.c Discuss/Consider possible ordinance revisions.

Memo - Possible ordinance revisions.pdf

Potentially adding a zoning district for half and 1 acre lots also language for transitional lots. Further discussion will be held at a future meeting.

CLOSING

7) ANNOUNCEMENTS & FUTURE MEETING DATES

June 9th - cancelled
June 23rd at 5:00 PM

8) ADJOURNMENT

Motion by Michael Simonds, second by Jay Plemon to adjourn at 7:41 PM. Motion carried 5 - 0/ None.

Wendy Helgeson, Village Clerk
Approved:

Mark Mommaerts

Subject: Re: Meeting

Hello Mark and Planning Commission,

Here are my thoughts for Neighborhood C. Look for scans of maps separately.

I believe we established the Neighborhoods in order for the Village to determine a vision for each neighborhood. When we have a vision and set our expectations as a standard, then potential developers can decide if they would like to develop that neighborhood or not. This saves the developer and the Village time and money.

I have met with the majority of the residents in Neighborhood C. No one wanted the area to be developed, but most understand that people have some rights to do what they want with the land they own. If, and when it would be developed, they hoped for preservation of natural areas, protection for the environment, large lots, and to maintain a rural character. I am trying to approach this neighborhood systematically with an open mind.

Stormwater. I looked at the swamp, the wetland and flood boundaries. Chris Pagel has given us data showing rainfall per year is increasing as well as the amounts of single rainfall events. What we have done regarding storm water may not be sufficient as rain increases. Development adds to storm water including sump pump discharge. We should plan accordingly and increase the capacity of existing and new storm water ponds. I would also like to see sediment pond discharge rates slowed.

Due to rainfall increases mentioned earlier I think the government will extend the flood plain in the future. I recommend extending the buffer of the flood plain a few feet in elevation in anticipation of this. I marked a map with a purple zone that I extended to the 800 elevation line, as a start of conversation for the best placement of this buffer. I would like Chris Pagel's opinion on how far this Stormwater Retention Zone should extend. Our swamps are Greenville's largest and most flexible Stormwater Retention resource. I recommend that we prohibit development, building and bringing in any fill in the Storm Water Retention Zone. This would preserve the swamp's existing storm water capacity. Any infringement on this Storm Water Retention Zone will significantly increase the costs to the Village in building and maintaining ponds as well as responding to homeowner's flooding problems.

How Far? How far north does the Village want to allow subdivision development? For my map drawing exercise, I pretended that I wanted to develop up to the edge of the flood plain, both to the north and west. In the north end of Neighborhood C the swamp and wetland approaches Mayflower Road and there are a few homes and a few existing ponds which may make it cost prohibitive to bring in infrastructure of roads, lift station, water, sewer, storm sewer, and storm water retention ponds. We would need the appropriate staff to do cost analysis on extending a residential subdivision to the north edge of Neighborhood C.

Will two Lift Stations be needed for this Neighborhood? Does the Village get good use of its money if we place a Lift Station on the north end of Neighborhood C? If there were only one Lift Station how much of the area could it cover? Is it better to ask how many homes it would service? Where would it be placed? Does this determine how far north and west we develop?

Green Space. No one was in favor of a traditional playground however a general green communal space that could be used for a game of flag football, soccer etc. was recommended by a few residents. People preferred trails, especially if they connect storm water ponds or other preserved natural areas.

Many people spoke about wanting to preserve the ability to hunt, both as a hobby and to keep deer population (and car accidents) down. There are laws regarding distance from a residence (300 feet) and distance from a public park/trails. (660 feet). Most of the land in the swamp was purchased to hunt deer. I think the rights of the Greenville owners of that land should supersede the rights of a developer to place houses or parks which would limit the existing hunting rights. I drew placement of a few storm water ponds by putting them at lower elevations. I also marked some green space for nature preservation. I then, connecting green spaces with trails. These are close to the swamp because of the lower elevation, but I would like Chris Page to advise if some ponds could be placed further from the swamp/hunting land.

Roads. We have an ordinance to continue existing roads. We have two official connecting roads. The first is Sherwood Point Drive which I show continuing from across Everglade Road. The second access I drew is placed connecting to Everglades where there are two side by side driveways. Historically this was the entrance to all the homes further to the north. At some point the northern homes built the private road that comes out on Mayflower at Edgewood Drive. I drew this road from Everglade circling to Mayflower instead of following the current private road at a right angle. This would allow homes to be built on both sides of most of the road to capitalize on the cost of the infrastructure and to keep it from getting too close to the lower wetter land. I have concerns about having the connection point at the current private road & Edgewood because of the lack of visibility. This spot is close to the top of the hill to the north (where I drew in a road). I know of two people who have been struck by cars here because of the short distance for a driver to see a person crossing the road from the crest of the hill especially at higher speeds.

Several exits onto Mayflower are shown, but not all are needed. Two exits onto Everglade would suffice for the first phase. Exits to Mayflower could be added as development continues north. We can keep the number of roads (thus cost) down by drawing very long blocks with deep lots. Is there a way for infrastructure costs for the entire neighborhood to be 'paid back' to the developer by as sections are developed? This would allow roads to be built on the edges of original farm fields to keep the number of roads down, (thus maintenance costs down in the future). This also allows the large deep rural lots that would be the best fit for this neighborhood. The deeper lots would help Greenville maximize the number of houses on a road to make the best use of infrastructure. Storm water ponds and green space could also be shared by multiple phases of development. Sidewalks would not be needed in this rural development.

Thank you for the opportunity to truly think about development, neighborhood by neighborhood, as they each have different features and characteristics. I look forward to thoughtful discussions with you, the Planning Commission, Village Board, and citizens.

Loyally,

Leanne Meidam Wincentzen
